

COURSE MANAGEMENT

Problem Statements

Problem statement/Usecase	Feature
Course creators create courses as a regular exercise - However they do not want to publish all of them at once. -They do not want to overwhelm users. -They also do not want to manually remember when to publish a course and come to the platform and do it. -They want to set a date in advance as to when these courses are to be visible to learners.	SCHEDULING
Some content pieces in the coursters are subject to obsolete over a period of time. -They want to the ability to ensure learners do not consume the expired content. -They later want the ability to update these courses and make them re-visible to learners.	ARCHIVAL/EXPIRY
The customer conducts in-person events/sessions on particular days. -They want learners to complete particular courses before they attend these sessions so that they are prepared for the same.	DUE DATE

SCHEDULING A COURSE

Overview - With this implementation going forward, course creators/admins will have the ability to schedule a course for publishment at a later point of time without having to make it live for learners right away.

Course Scheduling

- GIVEN a course creator has completed setting up course content
- WHEN they choose to publish - they will have the option to "Schedule for Later" at publication
- THEN they can select a future date/time (minimum 1 hour from time, to maximum 2 years)
- AND the course status changes to "Scheduled"

- AND the course remains invisible to learners until scheduled time

Automated Publication

- GIVEN a course is scheduled for publication
- WHEN the scheduled date/time arrives
- THEN the system automatically changes status to "Published"
- AND sends assignment notifications to all configured learners
- AND the course becomes fully accessible to assigned learners
- AND the course becomes available in the explore page

Scheduled Course Editing

- GIVEN a course is in "Scheduled" status
- WHEN the course creator edits the course
- THEN all changes are saved automatically or saved with 'Save Changes' without requiring republication
- AND the course remains scheduled for the original date/time

Schedule Management

- GIVEN a course is scheduled
- WHEN an administrator needs to modify the schedule
- THEN they can reschedule to a new date/time
- OR cancel scheduling (return to draft)
- OR publish immediately (override schedule)

ARCHIVING A COURSE(EXPIRY)

Overview - Courses can now be archived meaning they will not be visible or accessible to learners but will be open to creators/admins to update and re-publish.

Course creator/admins will now have the ability to:

- Set a particular date as archival date with date picker
- Set default time periods like month, 3 month, 6 months, 1 year as archival

- Set a conditional archival date
 - archive when a lesson within the course expires

Manual Course Archival

- GIVEN an administrator wants to archive a course
- WHEN they set the course to archived status
- THEN the course becomes invisible to all learners
- AND all enrolment and completion data is preserved
 - meaning from within manage courses, the creator/admin will continue to be able to access learning and learners reports
- AND administrators retain full access to course data and editing capabilities
 - meaning users can continue to edit the course and also will have the ability to continue to add learners while the learning is in archived state

Scheduled Archival

- GIVEN a course has a scheduled archival date
- WHEN the archival date arrives
- THEN the system automatically changes course status to "Archived"
- AND sends notifications to administrators
- AND preserves all learner data and progress

Content-Driven Archival

- GIVEN a course has content pieces/lessons with expiry dates(from Paperflite)
- WHEN any content piece expires
- THEN the system automatically archives the course
- AND sends archival/renewal notifications to course creators

Course Republication

- GIVEN a course is archived due to content expiry
- WHEN all expired content is renewed or replaced
- THEN administrators can republish the course with one click

- AND the course returns to "Published" status
- AND assigned learners regain access
 - However, if we do this, we will have to in detail invest in version control.
 - because 1 learner could have gotten a score % based on 1 version whereas could have got the same % with another version - misleading ranking
 - Can we rather push the practice of cloning the archived course and then making the edits and publishing it as a new course.
 - Because if its valuable content(medical information) thats been updated - it does not matter if the course has been previously completed - it anyways has to be completed again.

Solution based on Research

- At the time of re-publishing a course that has already been completed by a learner - user should be given the ability to synchronise the changes - meaning learners progress must be updated based on the changes made.
- Notification mailers has to be sent out to completed learners that a course they have completed has been updated asking them to retake the same.
 - the previous course attempt's record also needs to be maintained.
- In case of podcast and simulation - we should push for re-creation not new version publishment.

DUE DATE FOR COURSES

Overview - Course creators will now be able to add due dates for the learners of courses.

The due date can be set as:

- a particular date with date picker
- time period in relevance to enrolment/assignment
 - 10 days from enrolment/assignment date

Due Date Configuration

- GIVEN a course creator is setting up a course
- WHEN they configure a due date
- THEN they can set a specific calendar date/time
- OR set time period in relevance to assignment/enrolment date for every learner
- AND configure reminder notification timings
 - send 1st notification 'x' days before due date
 - send 2nd notification one day before due date

Due Date Behavior

- GIVEN a course has a due date
- WHEN the due date passes
- THEN learners retain full access to course content
- AND the system marks completion as "overdue" if not completed
- AND administrators can track completion vs. due date performance
 - admins will be able to see clearly in learners list as to who have completed or not started past the due date

Due Date Notifications

- GIVEN a course has a due date configured
- THEN overdue notifications are sent according to configured frequency

Course Scheduling

Absorb LMS

They do enrolment scheduling - not course.

Scheduled Enrollments

Updated 2 months ago

The **Scheduled Enrollments** feature allows **Administrators** to automatically enroll **Users** into **Online Courses**, **Curricula**, and **Course Bundles** at a future date. This helps streamline onboarding, align training with key milestones, and ensure **Learners** gain access to content when they need it without manual intervention. Whether you're planning a compliance refresher or onboarding new hires, **Scheduled Enrollments** ensure timely and consistent **Course** access.

In this article, we will go over how to enable and create **Scheduled Enrollments**.

Automatic Enrollment Date

You can also set a future date when **Users** will be enrolled into the selected **Courses**.

Automatic Enrollment Date Advisory

Once saved you will not be able to change the **Automatic Enrollment Date** section. We recommend duplicating the **Scheduled Enrollment** as it will create an identical form with all the options available for editing.

Custom Date

You can set specific date when you want **Users** to be enrolled in the **Courses** by selecting a **Custom Date**. If you do not chose a delay, the system will begin enrolling **Users** the following day.

Relative Date

Scheduled Enrollments do not enroll retroactively. If you set an enrollment date in the past it will not enroll the **Users**.

Currently, you can select from two **Relative Dates**: **Date Hired**, **Date Added**, **Date Terminated** (system default), or any **Custom Date** that is associated with the **User's Profile**. When selected the system will enroll the **User** specifically on that date.

The **Add delay** feature will allow you to select how many days, months, or years **before** or **after** the **Relative Date** you'd like your **Users** to be enrolled.

Set duration you can chose in what period of time should the **Scheduled Enrollment** actively enroll **Users**.

Once you have finished filling out the fields, click **Save**. Your new **Scheduled Enrollment** will be listed on the **Scheduled Enrollments Report**.

Canvas LMS

<https://teaching.pitt.edu/resources/canvas-scheduled-page-publication-feature/>

Note: This is for lessons

Canvas Scheduled Page Publication Feature

Starting Oct. 17, 2022, Canvas will launch the ability to schedule when a page gets published. While you have been able to schedule the release of assignments, or of whole modules for a while, scheduling the release of a single page of content has been neither feasible nor convenient, until now. You can read more below, or you can go to the [Canvas release notes page](#) to see the details from the vendor.

Directions

To schedule a page for publication at a specific date and time:

1. Navigate to that page.
2. Click the edit page button in the top right.
3. Select a Publish At date and time in the page options below the Rich Content editor.
4. Save the page. ("save and publish" is not available when scheduling a page).

This adds a new icon to your published column, more than just the gray crossed circle for "unpublished" and the green check for "published". Pages that are scheduled to publish in the future will have a red calendar icon instead.

Possible Uses

Some ways in which you may be able to use this feature for your courses include scheduling the timed release of:

- A list of prompts for an in-class discussion exercise.
- Case studies for students to examine during small group activities.
- Class notes or slides at a certain point before or after lecture occurs.
- Exam review materials.
- The answer key to an assignment (after submissions are closed).
- Other content (like a video or account information for a simulation) at the relevant time.
 - Note: Scheduled embedded media, such as a Panopto Recording, usually does not prevent students from accessing it early. They may be able to find or locate it in other ways (like visiting Panopto directly).

In each example, the publication will happen automatically so students can access the materials without the instructor needing to remember (or even be at their computer) to click the publish button at the release time. These all also assume that the page is one that, for whatever reason, should not be published in advance.

Directions

To schedule a page for publication at a specific date and time:

1. Navigate to that page.
2. Click the edit page button in the top right.
3. Select a Publish At date and time in the page options below the Rich Content editor.
4. Save the page. ("save and publish" is not available when scheduling a page).

Blackboard

https://help.blackboard.com/Learn/Instructor/Ultra/Course_Content/Release_Content

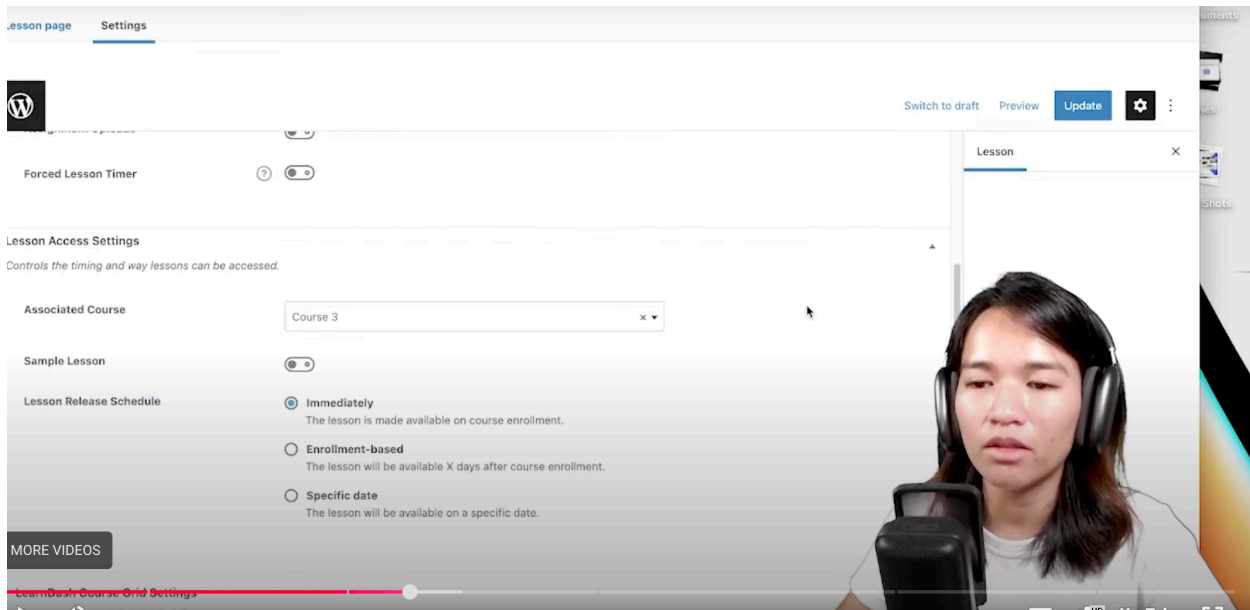

Release content by date

Select **Date/Time** to define the time period in which students can access content. Blackboard will check any dates you set against the due date of the item to ensure that you don't release an item after its due date.

- **Example:** Content is covered in a specific order. You want students to access content only *after* you've discussed it in class. You don't want students to work ahead.
- **Example:** Release your final test *during* your institution's scheduled final tests week.

LearnDash

- This is for lessons

Course Archival/Expiry/Inactivation

Absorb LMS

Over time, Absorb Content is refreshed with new and updated information, while previous versions are retired and no longer available. When a new version is released, client **Admins** will need to verify the presence of the latest content package in their **Online Course**, ensuring uninterrupted access for **Learners**.

Upcoming Course Retirements

This article describes the workflow for **Admins** to replace existing **Absorb Content**. If you are new to converting and managing content in Absorb, please review [this article](#) to learn more about our **Absorb Content Products**.

Upcoming course retirements can be found in multiple areas:

- Within the **Absorb Content Report**, add the **Display Column** for **Archived Date** and check for upcoming retirement dates:

The image shows a screenshot of the 'Absorb Content Report' table. The table has columns for 'Course ID', 'Course Name', 'Archived Date', and 'Retirement Date'. The 'Archived Date' column is highlighted in red, indicating it is the focus of the report. The table lists various courses and their corresponding dates.

Outcome of Inactivation

When a **Course** is **Inactive**, it is treated differently by the system. The core distinction of an **Inactive Course** is that it will not be visible to **Learners** in the **Learner Experience**, with the exception of the **Transcript**.

The following define specific outcomes of inactivating a **Course** throughout the LMS:

Administrator Enrollment

An **Inactive Course** can still be the target of an **Administrator Enrollment**. However, even if an **Admin** enrolls a **Learner** in an **Inactive Course**, the **Inactive Course** won't appear in **My Courses**.

An **Administrator** is also capable of creating an **Enrollment Key** that includes an **Inactive Course**, and enrolling a **User** into the **Inactive Course** via the **Enrollment Key**. Similar to other methods, this enrollment will not allow the **User** to access the **Course** in the **Learner Experience**, until the **Course Status** becomes **Active**.

Enrollment Rules

Enrollment Rules will not trigger if a **Course** is **Inactive**. This means that an **Inactive Course** with the **Self Enrollment Rules** of **All Learners**, will still not appear in the **Catalog**. **Automatic Enrollment Rules** will not trigger, until the **Course** is **Active**.

It is important to note that if you have **Automatic Enrollment Rules** configured on an **Inactive Course** and the **Course** becomes **Active**, the **Automatic Enrollment Rules** will instantly attempt to process **Enrollments**.

Emails

An **Email** for **Courses** is often scheduled at the time of **Enrollment**, such as in the case of a **Nudge Email**. An **Email** will check with the system if the **Course** is **Active** prior to distribution, and if the **Course** is **Inactive**, the **Email** will not be generated, even if it was scheduled.

Post Enrollments

A **Post Enrollment** that targets an **Inactive Course** will still be processed by the system. A **User** enrolled into an **Inactive Course** via a **Post Enrollment** will still not be able to see the **Course** in the **Learner Experience**, but the system will reflect the **Post Enrollment** occurring.

Inactivating a **Course** can be used to remove a **Course** from active circulation. When a **Course** is **Inactive**, it is treated by the system differently. The primary reason to inactivate a **Course** is when you do not want it to appear in a **Catalog**, or be accessed by your **Users**.

Important Notes

- Deleting converted **Online Courses** will remove all historical records of enrollments related to that course. As a best practice, we recommend changing the **Online Course** status from **Active** to **Inactive** (instead of deleting the **Online Course**) to retain enrollment history of the **Online Course**.
- When a **Lesson** is replaced using existing content, historical enrollment data will be retained on the **Online Course**. **Learners** with enrollments in a status of **In Progress** or **Not Started** will see no change on the **Learner Interface**; however, the next time they launch the **Course**, **Learners** will be prompted to start the new **Lesson**.
 - Auto-enrollment on an existing **Course** will remain in place when a **Lesson** is replaced – no notification will be sent to **Learners** that content and/or **Lessons** have been replaced or updated.
- Content conversion from the **Absorb Content Report** into an **Online Course** is available to **System Admins** and **Admins**.
- When partner content is retired, the LMS will automatically make that **Course Inactive**.

Expiration

No Expiration

Time from enrollment

Date

Expiration is a setting that when configured, will remove access from a **Learner** at, or after a certain period of time. Once an **Online Course** is expired, a **Learner** will not be able to access the **Course**, even if they meet the **Self Enrollment** rules.

This setting has three selectable configurations:

No Expiration: The **Online Course** does not expire. This is the default setting.

Time from enrollment: The **Expire In** setting will be revealed, allowing you to determine a period of time. After the period of time has passed based on the date of enrollment, the **Online Course** will expire.

Expire In (Required)

0

Years

0

Months

0

Days

Date: The **Date Expires** setting will be revealed, allowing you to specify an exact date that the **Online Course** will expire.

Date Expires (Required)

Date

- Click **Timeframe (6)** to add a *start* and/or an *expiration date* to the course. You're also able to set the time for both options. After the selected start date and time, Learners will be able to access the course content. After the selected expiration date and time, the course will expire for all Learners.

How to work with time limits and expired courses

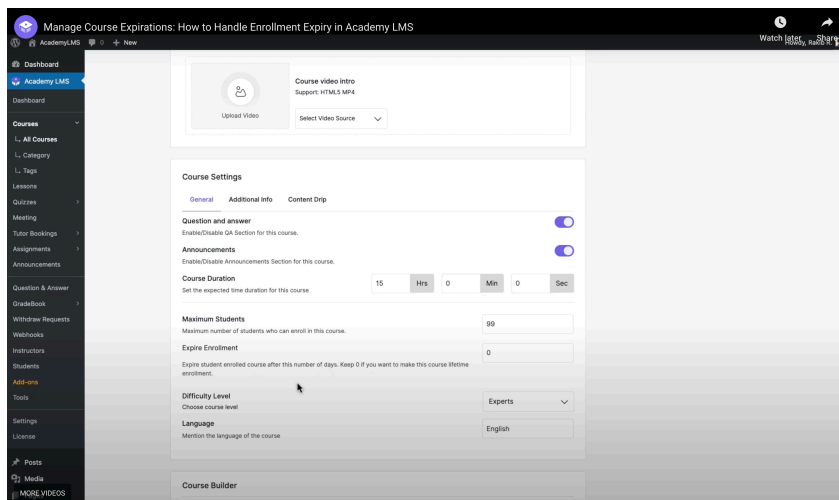

TalentLMS lets you set time limits for courses so that users must complete them on time, according to your training plan. When a user misses a course deadline, the course expires, and their access is revoked.

A. How to set time limits for courses

To set a time limit for a course, follow these steps:

1. Sign in to your TalentLMS account as an **Administrator**, go to **Courses (1)**
2. Hover over the **course** title you wish to add a time limit to, and then click **Edit (2)**.

Due Date

Absorb LMS

Due Date

Due Date

☒ No Due Date
 ☐ Time from enrollment
 ☐ Date

Due Date indicates to the **Learner** when they are required to complete the **Online Course**.

Admins will be able to clearly tell which **Learners** exceed the **Due Date**, using either the **Course Enrollments** or **User Enrollments** report and referencing the **Due Date** column.

Utilizing the **Due Date** setting does not remove access to the **Online Course** for a **Learner**.

This setting has three selectable configurations:

No Due Date: This **Online Course** does not have a **Due Date**. This is the default setting.

Time from enrollment: The **Due In** setting will be revealed, allowing you to set a period of time. After the period of time has passed based on the the date of enrollment, the **Online Course** will be flagged as **Due**. The **Learner** will also be made aware of how long until the course is **Due**.

The Due Date and Time are the date and time when the assignment is due. Student assignments submitted after the due date will be marked as late in the Gradebook. Due Dates are not required in Canvas, but they are helpful in managing course workflow and deadlines.

Skilljar

Adding Due Dates to Published Courses

Updated 2 months ago

Follow

Add optional due dates to your published courses via their settings pages in your Skilljar dashboard. Course due dates allow you to give students a set number of days or months that they must complete the course after they've enrolled.

Skilljar admins can also see if a student has completed a course before the due date or is overdue in the "Due" column of your Skilljar dashboard's enrollments analytics page. To learn more about enrollment and due date analytics, see our [Enrollments Analytics help article](#).

- **Note:** A course doesn't expire after the due date and students can still access the content even after a course is overdue. To prevent students from accessing a course after a certain date, you must set an access expiration date. To read more about course access, see [Setting an Access Expiration Period for a Course](#).

Student experience

Students can view the due date of their enrolled courses and if their course completion is overdue in the Registrations table within their "My Profile" page. If a due date is assigned to a course they've registered for, the Enrolled column will show the enrollment date and then the due date underneath. If they haven't completed the course by the due date, it will read "Overdue."

- **Note:** Students can still access content even after a course is overdue.

LearnUpon

The difference between due dates and valid periods

A **due date** sets an **advisory** date for a learner or a group to complete a course. After the due date passes, learners can still access the course.

A **valid period**, also called an **expiry date**, sets a **definite** date for when a user must complete a course. After the valid period expires, users cannot access the course.

RESEARCH for Open Questions

Course Archival

- **Lets say a course thats been assigned to all learners and a few learners have completed, few are in progress and few not started.**
 - what happens when the course is updated while it's in the archive state and its republished?

Source - <https://support.absorblms.com/hc/en-us/articles/38852556283539-Retroactive-Changes-in-Absorb-LMS>

Chapters and Lessons	Yes.
-----------------------------	-------------

Learners who are enrolled and not finished with the **Course** will see these updates. Completed enrollments will not be required to take the **Course** again.

- For completed learners, no updates will reflect. They will remain as completed.
 - learners can access the new version
- For in progress and not started - their in progress % will be updated as per the latest version that is currently live.

<https://help.talentlms.com/hc/en-us/articles/9652321744924-How-to-change-a-user-s-course-completion-status>

Synchronize

When you update your course content, you may want to synchronize your users' progress with the new version of the course so that their progress reflects the updated material. Synchronization revokes the **Completed** status for users that had completed the course in the past and haven't completed any new units you may have added. Here are the steps:

1. Hover over the user you wish to synchronize and click the **Synchronize (1)** option that will appear.

User	Role	Progress status	Enrollment date	Completion date	Expiration date	Actions
Abby Steele	Learner	Completed	08/22/2019	08/12/2024	-	Synchronize
Abbe Barker	Learner	Completed	08/22/2019	11/22/2024	-	...
Alba Mufusa	Instructor	-	08/23/2024	-	-	...
Blake Norris	Learner	Not started yet	11/23/2018	-	-	...
Boris Proctor	Instructor	-	08/23/2024	-	-	...
Clay Allen	Learner	Not started yet	08/23/2024	-	-	...
Lulu Chavallier	Instructor	-	11/27/2018	-	-	...
Melissa Brooks	Instructor	-	11/23/2018	-	-	...
Support Heroes	Instructor	-	11/23/2018	-	-	...

2. A confirmation pop-up will show up. Click **Synchronize** once more (2) to confirm.

Synchronize user progress?

Are you sure you want to synchronize the progress of Abby Steele based on the current course material?

Synchronize Cancel

SAP

Reassigning Online Learning Items after Modifying Them

If you modify an online course (learning item), you need to manage changes for users who have the course in their assignments list.

Context

When you modify the online settings of an existing learning item, it's probably already assigned to users and those users have probably made partial progress in the learning item. If users have made partial progress in the online content, then when you make changes, you see the **Reassignment Assistant**. It helps you manage the change to the learning item with the users who are assigned.

Caution

With the **Reassignment Assistant**, you can reassign the updated content to users. When you do, they lose all progress in the online content and must start over.
