Setting Up Your HeySales Account

Welcome to HeySales — your AI-powered sales coaching and learning management platform that helps your team learn, grow, and perform better.

Written by Ragunath M

Updated over 3 months ago

HeySales – Your AI Sales Coach

HeySales delivers **real-time coaching**, **adaptive micro-learning**, and **flexible training formats**, so your sales reps get the right guidance at the right time.

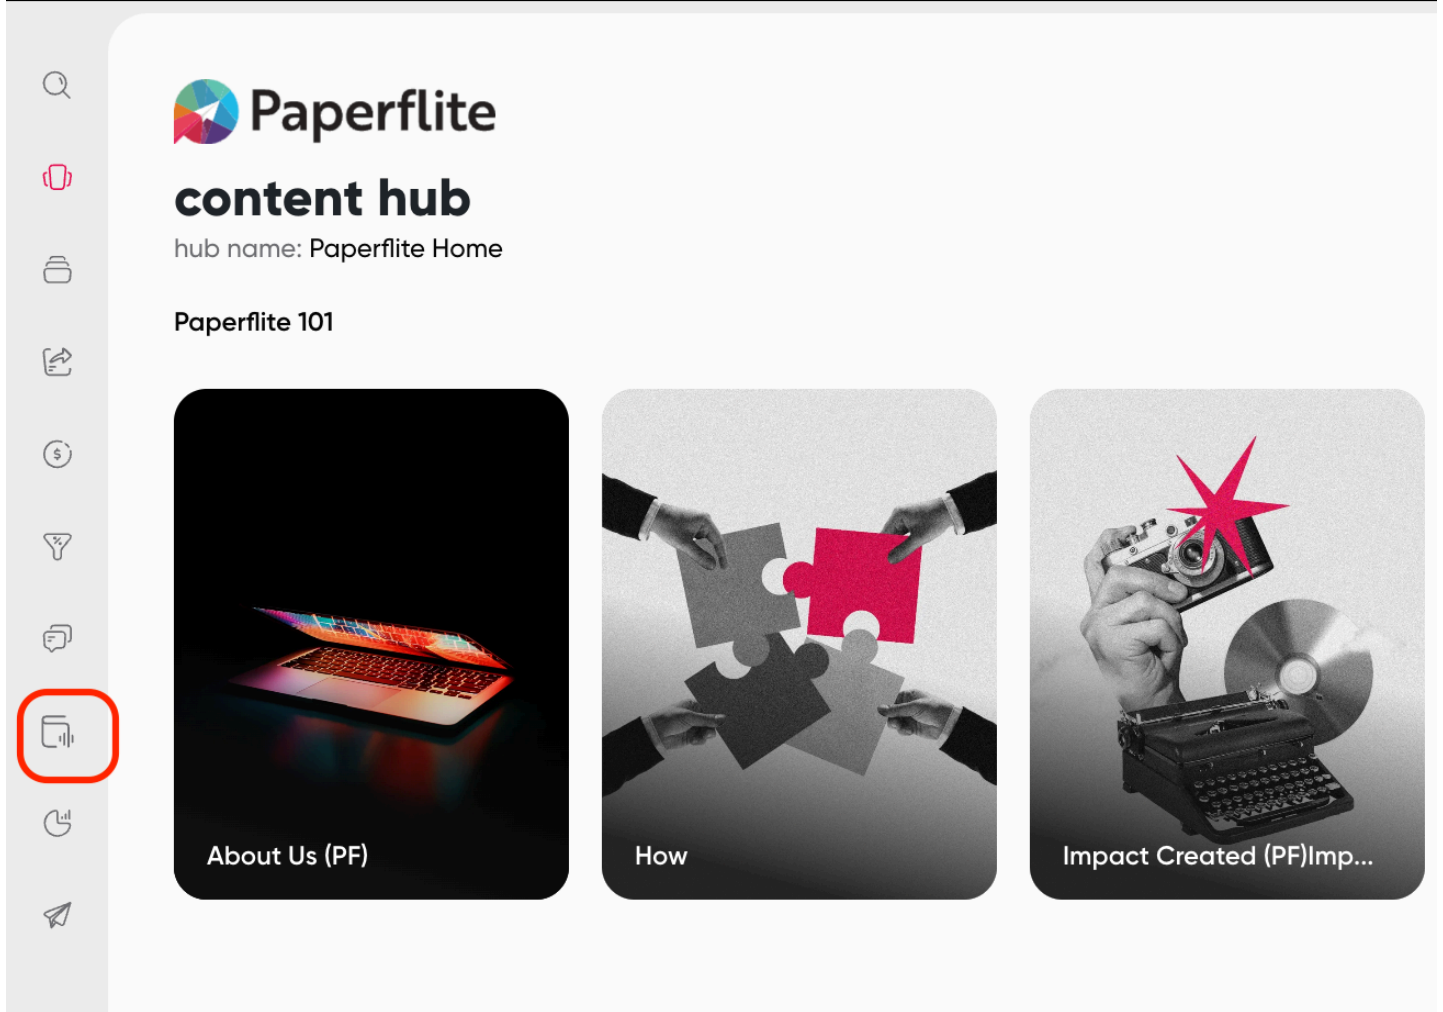

With HeySales, you can:

- Create personalized learning paths for your learners or sales reps.
- Use **AI-powered call simulations** and gain **call performance insights**.
- Design and deliver **courses, podcasts, quizzes, and certifications**.
- Track progress with detailed reports for learners, reporting managers, and admins.

Accessing HeySales

You can log in to **heysales.ai** directly through your company's **Paperflite instance**.

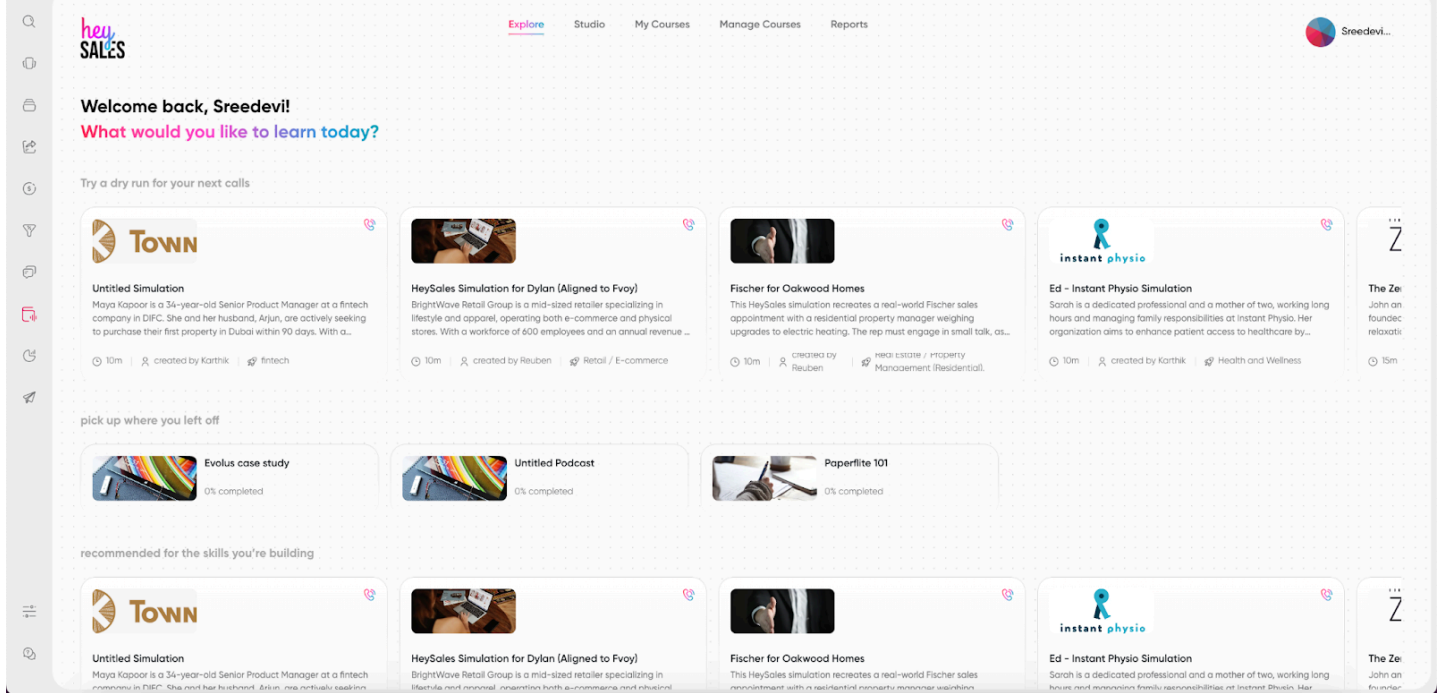

1. Log in to Paperflite at <https://www.paperflite.com/signup>.
2. On the left-hand panel, look for the **HeySales.ai** icon.
3. Click the icon to open the **HeySales Explore** page.

Explore Page Overview

The **Explore** page is your central hub for all available content. You'll find:

- **Courses** you can take.
- **Podcasts** created for your team.
- **Call simulations** to practice and improve.
- **Trending or popular courses** within your organization.
- **Courses you've already started** for quick access.

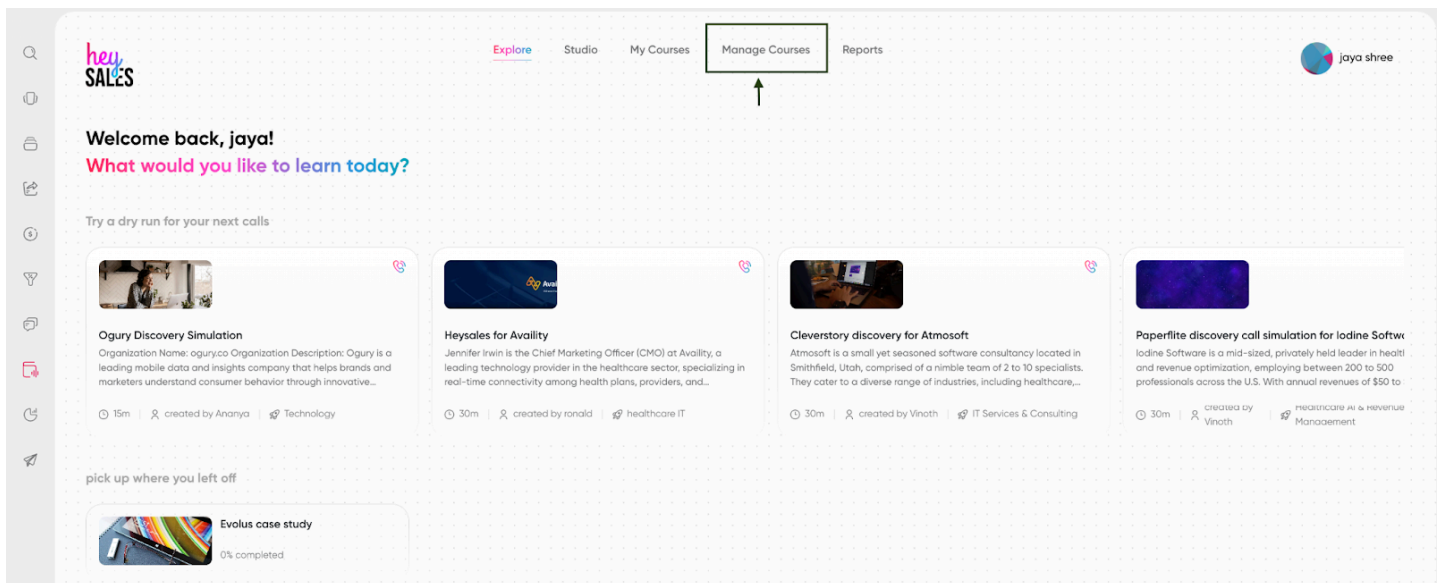

Creating a Course (Admin Only)

If you're an admin, you can create courses for new hires or experienced reps, or move existing learning materials to HeySales.

Step 1: Start a New Course

- Click **Manage Course** → **Create New Course**.
- Add your **Course Title** and **Description**.
- Begin building your course structure.

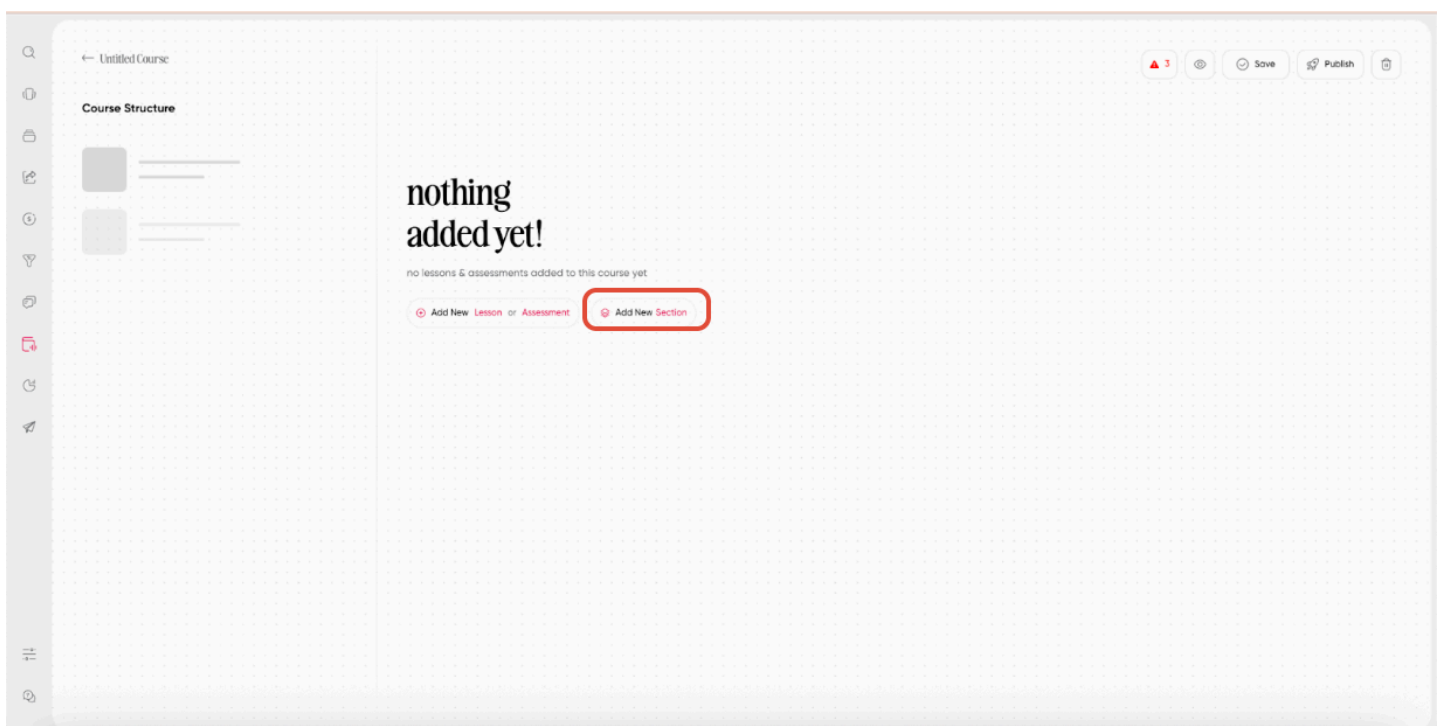

Step 2: Add Sections to Your Course

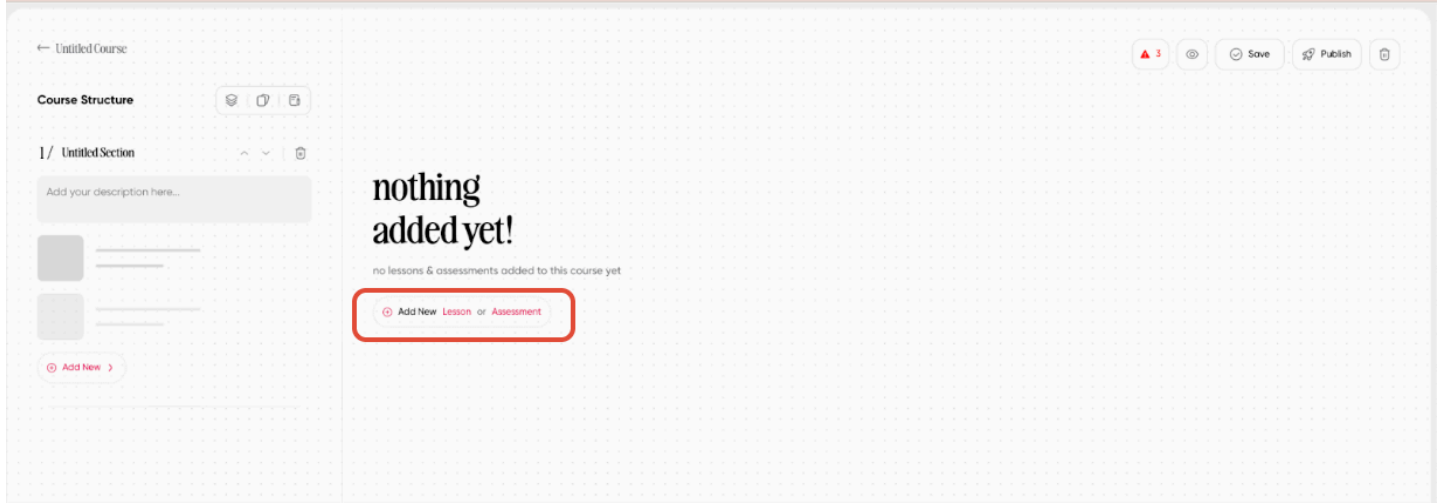

Sections (or modules) help you organize topics within your course.

1. Click **Edit Course Structure**.
2. Click **Add Section**.
3. Give your section a **Title** and **Description**.

You can add new **Sections**, **Lessons**, or **Assessments** using the icons next to the Course Structure panel:

-  Section
-  Lesson
-  Assessment

Step 3: Add Lessons to Your Course

You have three easy ways to bring content into **HeySales.ai**:

1. **From Paperflite:** Select existing content from your Streams or Collections.
2. **From Your Device:** Upload files directly from your computer.
3. **Via URL:** Add links to external learning materials.

These flexible options let you curate content seamlessly from multiple sources.

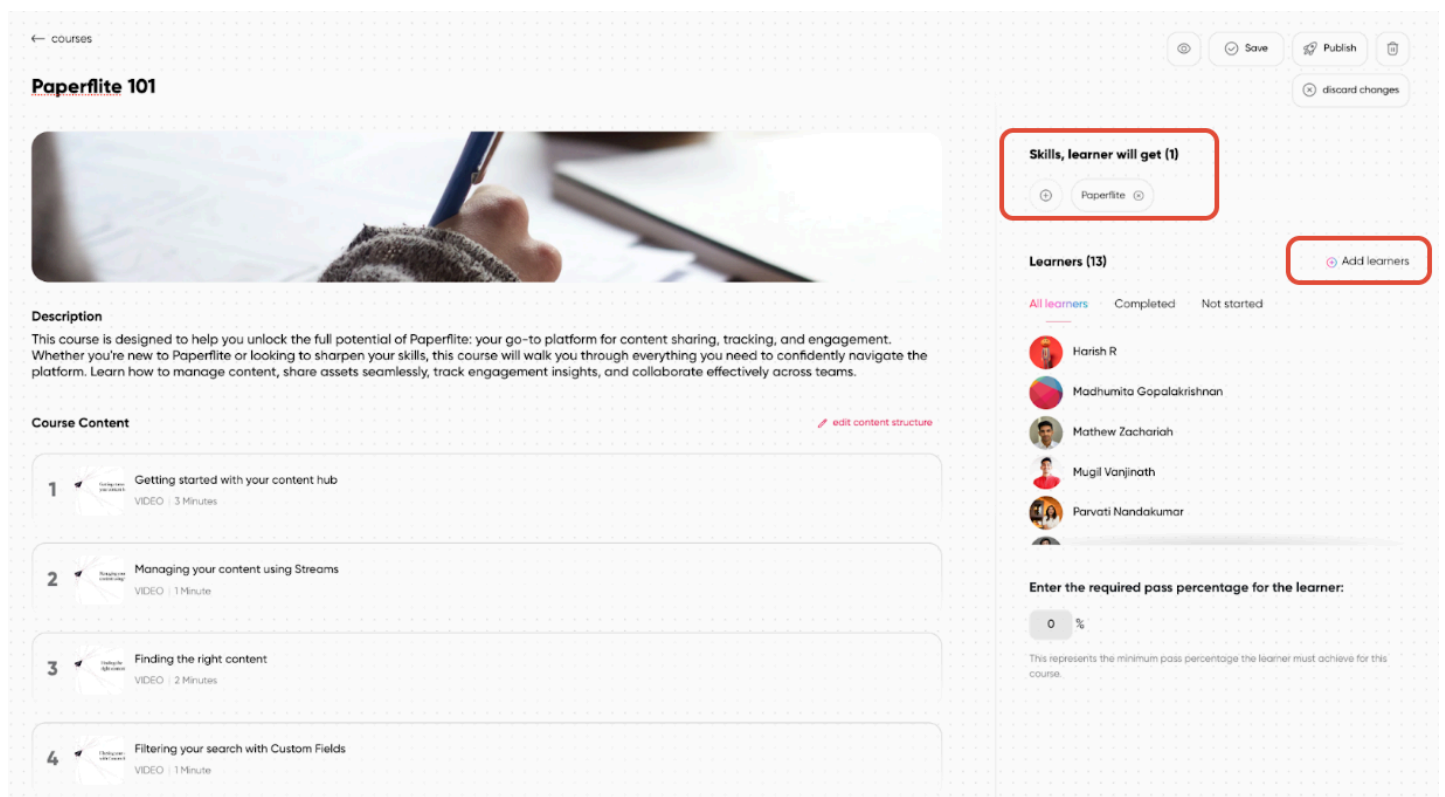

Step 4: Name and Describe Your Course

To make your course engaging and easy to navigate:

- **Title & Description:** Keep it concise and clear.
- **Course Banner:** Add a relevant image (recommended size: **800 x 180 px**). You can upload one or choose from the in-built **Pexels** library.
- **Skill Tags:** On the right panel, tag key skills your learners will develop from this course.

Once setup is complete, you can **assign the course to learners**.

Learners will only see courses assigned to them by an admin on their HeySales dashboard.

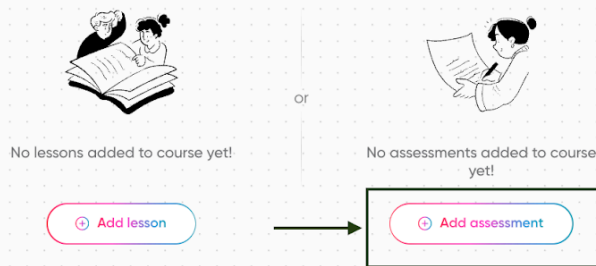

Adding Assessments to Courses

Assessments help reinforce learning and measure progress. You can include them:

- **After each lesson** – for quick comprehension checks.
- **At the end of a course** – for final knowledge testing.

HeySales offers multiple question formats:

- **True/False**
- **Multiple Choice (MCQ)**
- **Open-Ended Questions**

Creating Questions Manually

- **True/False:** Choose the correct option.
- **MCQ:** Enter answer choices and mark the correct one.
- **Open-ended:** Provide a model answer for AI evaluation.

The screenshot shows the Paperflite course creation interface. On the left, a sidebar contains navigation icons. The main area is titled 'Untitled Course' and features a 'Course Structure' section with three items: 'Section 1: Introduction to Paperflite' (4 Questions), 'Section 2: User roles and capabilities' (3 Questions), and 'Section 3: Creating and using...' (3 Questions). The 'Add Lesson' and 'Add Assessment' buttons are visible at the top of the structure. The right panel displays 'Section 1: Introduction to Paperflite' with a progress indicator showing 1 of 4 questions. The question is 'What problem does Paperflite solve for?' and the answer type is 'Multiple Choice'. The selected answer is 'Digital Asset Management for marketers and sales rep', and other options include 'Content sharing' and 'Content analytics'. An 'Add new choice' button is at the bottom.

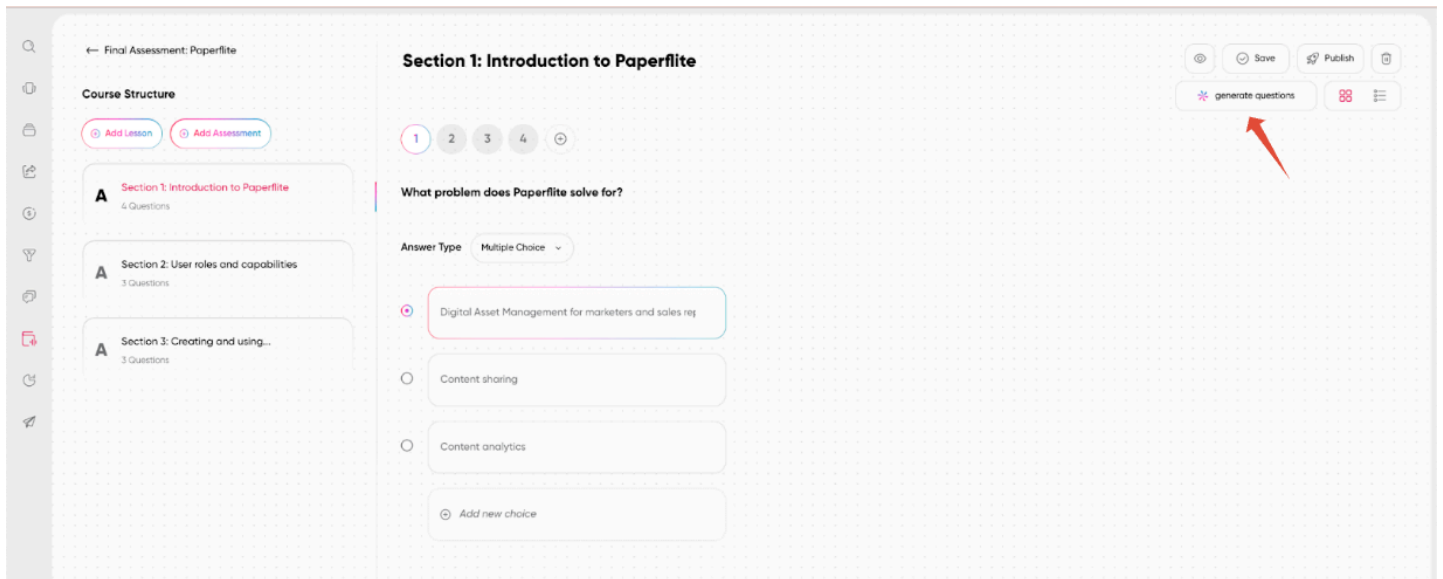

The AI checks open-ended responses against the key points in your model answer and provides instant feedback.

There's no limit to the number of questions per assessment. You can even divide them into sections for different modules.

Auto-Generate Questions with SEEK

Don't have time to create questions manually? Let **SEEK**, our AI assistant, do it for you!

- SEEK automatically generates questions by scanning the learning material attached to your assessment.
- It supports all **text-based formats** — DOCX, PDF, TXT, MD, EPUB, and more.
- It saves you hours of manual question writing while ensuring variety and relevance.

Note: SEEK auto-generates questions in slots 3, 4, and 5. Before publishing, remove blank questions (1, 2, and 3) to ensure a clean assessment.

Need Support?

If you need help setting up your HeySales account or creating your first course, reach out to us at support@paperflite.com — our team will be happy to assist you.
