

Plaud - Real Call Scoring

With this implementation, we will be integrating with Plaud in order to:

- record and assess in person sales conversations.
- send the transcript of the call as well as the summary/assessment to the CRM - linked deal to the conversation.

User Flow(Post initial setup) - Happy Path

- Before starting the conversation with the prospect in-person,
 - rep opens the heysales mobile app
 - rep views list of his/her active deals
 - rep selects which deal he is going to be having a conversation now with
- Post selecting the associated deal,
 - rep clicks on start recording
 - signals user's integrated Plaud device to start recording via the embedded integration SDK
 - once the conversation is complete, rep clicks on stop recording to signal Plaud to stop recording
- After the recording is complete,
 - the Plaud recording starts getting processed - transcription and summary
 - Once processing is complete, Plaud will trigger a webhook event saying processing complete and transcript ready
 - The call recording/transcript will be available within our application for both the rep and manager to view

- We will fetch the transcript and assess the call with the same
- We will then call CRM API to push both the Call transcript and the assessment to the deal as notes

Feature 1: Deal Selection & Recording

- Rep opens app → sees list of active CRM deals of his via CRM integration
- Rep selects deal → taps "Start Recording"
- Plaud device starts recording automatically
- Rep taps "Stop Recording" when call ends
- System shows "Processing..." until transcript ready

Feature 2: Transcript & Playback

- Once transcript ready, rep and manager can:
 - View full transcript text
 - Listen to audio recording
 - See transcript - call assessment
 - Share with manager (optional)

Feature 3: CRM Integration

- Recording automatically linked to deal in CRM
- Activity/note created

Feature 4: Device Linking

- One-time setup: rep enters Plaud device serial number
- Backend links device to rep account
- Rep can now use device without further setup
