

Simulation - Analytics

With this implementation, we will be implementing Simulation analytics for Simulations within Courses as an extension and closure for the Learning Pathways epic.

Manage - Simulation

- For completed simulations from within courses, the cards in simulation manage will get updated.
- Learners will get added in the list as well as soon as a course with simulation is assigned to a learner and that record will get updated based on course completion status.
- Only the last attempt of the simulation at the time of ending course will be considered as data.

Manage - Course

- For completed course attempts with simulation in them, score of simulation is to be considered in addition to assessment scores for scoring the course as a whole.
 - meaning if only simulation is there, that score will become course score.
- In the completed attempt breakdown, manager will be able to view detailed
