

Simulations - Reports

Objective

Enable coaches and admins to track detailed analytics for each call simulation and individual learner performance.

Scope

- **In Scope:** Overall analytics for each call simulation, drill-down learner-level reports, attempt history, learners list UI enhancement, ranking.
- **Out of Scope:** Aspect scores visualizations (charts), call recording features.

Design File

-

Features & Functional Requirements

High-Level Features

- **Call Simulation Overview:**
 - Display three title cards: Completion, Average Score, Avg. Time Spent.
 - Clickable learner list for detailed reports (completed learners only).
- **Learner Detailed Report:**
 - Three top-level metrics: Latest Score (with subtext), Attempts Taken (last 3 scores shown), Time Spent.
 - Attempt metadata: Call logged on date, call duration
 - Attempt dropdown if multiple attempts.

- Learner sidebar: All completed learners, sorted by recency. Highlight and auto-scroll to selected.

UI Acceptance Criteria

Simulation Analytics Overview

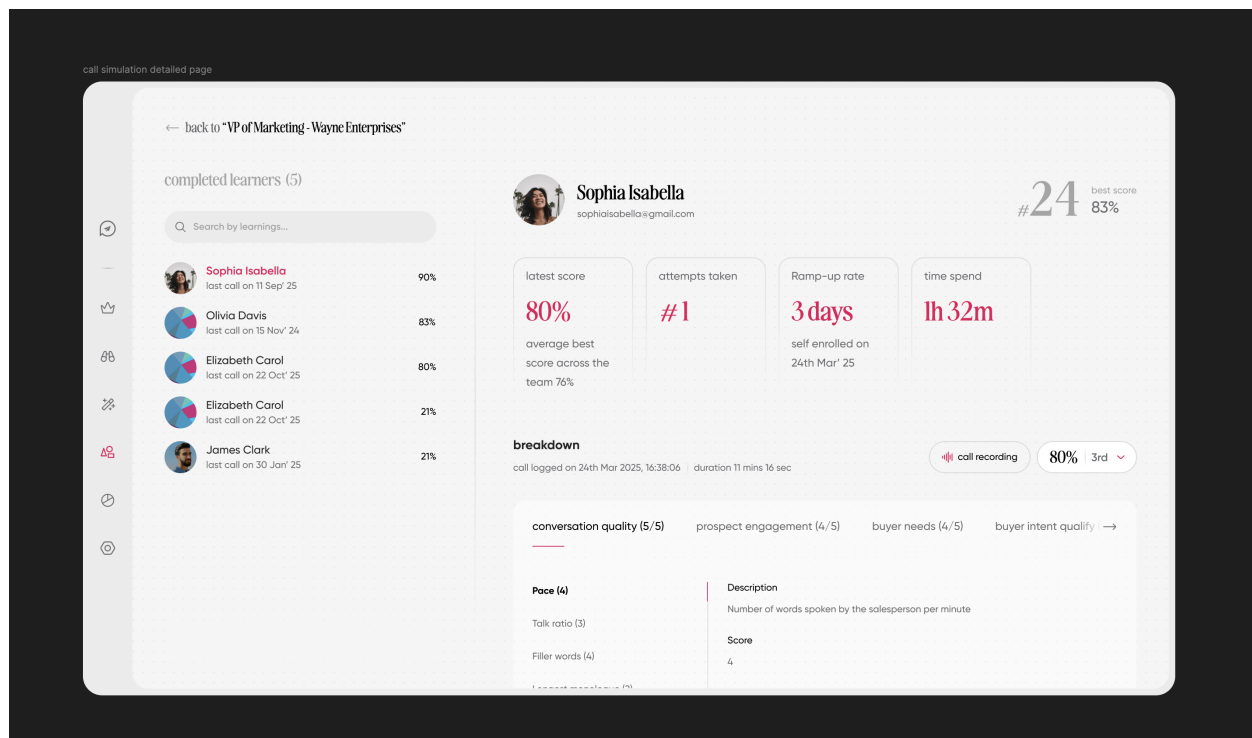

Criterion	Details
Completion % Card	Shows Z % "X completed of Y assigned/enrolled." -X will be the total unique number of learners who have completed the call simulation at least once. -Y will be the total unique number of learners who have either been assigned the learning or enrolled in the learning.
Average Score Card	Shows arithmetic mean of all completed attempts by all learners. The score % is to be rounded off to the nearest whole number. In the subtext, we will show across how many completed attempts the average is calculated. In case of no completion, it will show na and also subtext saying no learners have taken the learning yet.
Time Spent Card	Average time spent by completed learners(across attempts).
Learner List	Shows all learners and their current call simulation status.
Completed User (clickable)	Opens detailed report for that user.

Criterion	Details
Not Started User (disabled)	Non-clickable and visually disabled in list.

Learner Detailed Report

Metric	Details/Edge Cases
Latest Score	Display latest attempt's score (percent).
	Subtext: Compare to all learners' <i>best(highest)</i> scores. Meaning the latest score of the learner will be compared against the best scores of the other completed learners.
Attempts Taken	Show number, and for last three attempts, in the UI we will be showing score %.
	In case of only 1 attempt the score % UI will not be visible.
Time Spent	Show cumulative time user spent on this simulation across attempts.
Time to Complete (Ramp up rate)	Shows number of days it took to first complete the learning since enrollment/assignment Below this card, we will be showing the assignment/enrolment date
	The time measure will be hours if time taken is less than 24 hours The time measure will be days if time taken is more than 24 hours(day count will rounded off to the nearest day count based on total hours taken)
Latest Attempt Metadata	Call logged on date, call duration

Metric	Details/Edge Cases
Learner Sidebar	Sorted by last call logged date; current selected user in focus; auto-scroll to user in list.
Assessment Report	Below the overall cards, the assessment report for the particular attempt will be listed.
	The assessment report will vary based on the call - discovery call, cold call as existing today - that appears to the learner upon completion and evaluation.
Attempt Filter	In case a learner has completed more than 1 attempt, a coach/admin will be able to filter down by attempts to assess that particular attempt in detail.
	The dropdown will include all the completed attempts of the learner for that particular simulation.
	This will include even attempts that did not have enough time logged for a report - however in this case we will handle it in the UI saying report not available.
Ranking	Towards the top right corner of the detailed page - the rank of the particular learner will be displayed.
	This will be based on the 'best score' of all the completed learners(across their attempts).
	Along with the rank - the best score of the learner(based on which the rank was assigned) will also be displayed.

Out of Scope

- No UI for aspect scores/charts.
- No call recording/playback button.
- Search in list of learners
- There will be no number on the list of learners - only rank will appear within the detailed page

Conditional Copy Guidelines

For Latest Score Subtext

- **When there are more than 5 learners**

Average best score across the team: y

- If the learner's latest score is higher than previously best score:
 - New best score

Average best score across the team: y

- **When there are less than 5 learners**
 - We will not be showing the team average score - other requirements remain the same.

Note: Please validate copy alongside Product, please.

Learners List UI Enhancements

- With this implementation, we will also be implementing certain UI changes in the learners list.
 - We will be moving to a dropdown instead of horizontal scroll for learner status(all, completed, not started).
 - By default, all learners will populated with respective count reflected in the bracket.
 - The count will vary based on the selected filter.
-

Call Recording

Scheduling, Expiry, Due Date, Visibility - Market Research
