

Upload Call in Call Library

Objective

Currently, only real calls i.e calls from Zoom are brought into the Call library. There is no place for calls that users want to manually upload for scoring - could be calls they recorded in person, calls in some other service that they downloaded.

For example, we had a ticket recently where customer sent calls to us and we do the scoring and send a google sheet to them.

- With this implementation, we will be introducing the capability for users to upload calls manually in order to get them scored and added to the call library rather than just relying on the Zoom/Fireflies integration for the calls.

Design File

<https://www.figma.com/design/qaFY8C6uJLROXVtFaZS9DB/heySales---Master?node-id=14753-1738&t=eYTg39N3u6rep2n6-1>

Acceptance Criteria

- Users should be able to upload call manually and view scoring for the same.
- The details of the call in the call list UI will be taken based on the upload:
 - date will become the date the call is manually uploaded
 - there will be a pill that says Uploaded by: 'user who uploaded'
 - score pill
 - prospect name(extracted)
- The detailed page inside for an uploaded will be same as calls from Zoom
 - summary

- assessment
- recording
 - if in case of audio recording uploaded, we will show the audio
 - if in case of video recording uploaded, we will show the video
- Users can be of any role - admin, normal user, etc.
 - any user that has access to the module
- User will also be able upload bulk calls at once for scoring.
 - limit of calls is to be confirmed by engineering - @Abdullah Ahmed @Manuj Sharma
 - product- max no. of calls that can be uploaded without breaking.

UX

- The UX of call upload and processing will be same as the one as upload call in simulations.

Defects alignment:

- A call after being processed, the call will get added upon closing the slider or refreshing.
- When a call is getting processed, it should not disappear upon refresh.
- When calls are in queue, it should also reflect in UI.
