

Reports/Analytics Revamp

Time spent on courses issue

- Time spent on courses is to become the sum of duration of content sessions across the content within it.
- Currently, there is an existing open issue with lesson content sessions - this has to be fixed on priority.

Time spent card

- Time spent is to be sum of duration of learning records that have their started date within the selected time duration.

Learner Insights

- All learners should be listed sorted in descending order of learnings started in the given duration.
 - even learners with 0 should be listed towards the end
- All the data points in the table should be data only for that time range
 - i.e for example, gte last months last date and lte next months first date
- learnings completed in the given duration
- time spent learning
 - this is to be calculated with started date of the learning record
- learning assignments in the given duration
- pass %
 - out of the completed learnings for that duration - how much of it was passed
 - podcasts and simulation today to be calculated as pass by default
- avg. score %
 - out of the completed learnings for that duration

Course Insights

- All published courses should be listed sorted in descending order of learnings started for that course in the given duration.
 - pass % out of the completed learning records for the given time duration
- number of unique learners who are assigned/enrolled to it in the given duration
- number of learning completions in the given duration
- average score out of the completed learning records for the given time duration

Course Insights - Learnings Tab

- All published courses that the user is enrolled in should be listed
- enrolled date
- status
 - the status should be not started, in progress or completed
 - if the user has completed it even once it should be marked as completed
- completed date
- no. of attempts
- time spent
- average score
