October 2024

Built Self-Service AI Scorecard Builder

Teams can now create and customize their own AI scorecards without submitting a request. This feature ensures faster, more flexible coaching tailored to each sales process.

Functionalities/Capabilities

- Ability to name and create a scorecard
- Ability to give a scorecard a description
- Ability to clone a scorecard

- Ability to map a scorecard to a type of a call
- Ability to mark a scorecard as default
- Ability to mark a scorecard as default for a particular type of call
- Ability to generate scoring criteria using Seek for each sub-parameter
- Ability to give weightage to each parameter
- Ability to give weightage to each sub-parameter
- Ability to evaluate assessment questions as well against the entered acceptable responses optionally

Acceptance Criteria

- Within the setting module, under heysales, in addition to skills, now there will be a separate tab called 'scorecards'.

Scorecards Tab

- Clicking upon the scorecards tab, by default:

- there should be our default scorecard
- it should not be deletable
 - at any point in time, there is always supposed to be at least 1 scorecard
- In this screen, user is supposed to see the:
 - name of scorecard
 - description of scorecard
 - type of call its mapped to
 - default status if its marked as default
- Users can edit name/description of the scorecards in this screen.
- Users can clone a scorecard from this screen.

Create New Scorecard

- User is to be able to create a new scorecard.
- User is to be able to name and give description for the new scorecard.
- There will by default by one parameter and one sub-parameter - untitled.
 - there has to be at least one sub-parameter for a scorecard to be published.
- User can create multiple parameters.
 - should we set an upper limit?
- User can create multiple sub-parameters within a single parameter.
 - should we set an upper limit?
- User should have the capability to map a scorecard to type of call(s)
 - doing this will make this scorecard available only for those calls
- User should have the ability to mark a scorecard as default.
 - doing this will make the scorecard default for simulations.
- If a scorecard is marked as default and mapped to all type of calls - it will be the default for all type of calls.

- however, if a scorecard is mapped to particular type of call and marked default - it will override the scorecard that was marked as default for all type.
- scorecard 1 - mapped to all calls and marked as default
 - this will be default for all calls
 - after scorecard 2 is published - default for discovery only
- scorecard 2 - mapped to cold call and followup call and marked as default
 - this will be default for cold call and followup call
 - after scorecard 3 is published - this becomes for cold call only
- scorecard 3 - mapped to followup call only and marked as default
 - this will be default for followup call only

Logic - The default scorecard is based on which scorecard is the most specific to a type of call.

Scoring Criteria

- Under each sub-parameter, user should have the capability to generate scoring criteria i.e descriptions for 1-5.
- User should enter input into 2 fields:
 - one description of the sub-parameter describing what it is to evaluate
 - what the ideal rep would achieve in that
- Upon entering input into these 2 fields, user should be able to see a 'generate with Seek' button clicking upon which there will be loading state which will then populate the scoring criteria for that particular sub-parameter.
- Upon the scoring criteria being generated, the generate with seek button should be disabled/hidden
 - it will only re-appear/re-enabled when any edit to the primary inputs is made.
- All of the input fields - primary and scoring criteria are editable.

Open Questions

- What if scorecard is changed after a number of users have completed the simulation?
- Should we invest in multiple scorecards for a simulation now?
