

Podcast Generation Success - Notifications

With this implementation, we will be implementing a notifications to the creator during podcast generation/once the podcast generation is complete.

User Story

As a podcast creator, I want to be notified when the podcast I was trying to generate is now complete so that I can come back and review the podcast and proceed with assigning it to learners.

The notification will be of 3 types:

- Push notification
- Toast message
- Email notification

Acceptance Criteria

Notification Trigger(Push/Email)

- The notification should be triggered to the creator's email/browser once the podcast he had created is now complete(audio generation and segmentation complete - ready for consumption)

Toast Message Trigger

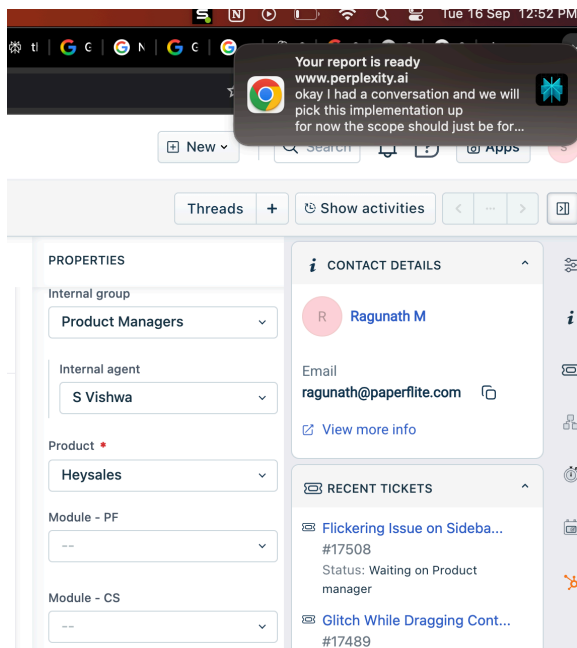

- The toast message should be triggered post clicking generate now from the podcast creation screen.

Push notification

- Once live, initially upon login to the platform, a popup must appear asking the user if he/she is willing allow permission for the heysales platform to send notification within Google Chrome and Safari.

- The user has to click on allow for the push notifications to be triggered to them.
- Once the permission is allowed, whenever the trigger point is activated, a notification should appear in the user's browser.
- Clicking upon the notification, user should be landed onto the podcast screen within studio and can go on to assign it to learners.

UI of the notification: heysales logo, Your podcast is ready, uploaded asset names.

Toast Notification

<https://www.figma.com/design/qaFY8C6uJLROXVtFaZS9DB/heySales---Master?node-id=2758-37959&t=Zd0UfUzyiYus69iP-1>

- The toast will be in the bottom right of the screen.
- The toast's copy will be updating across the 3 steps:
 - topic generation

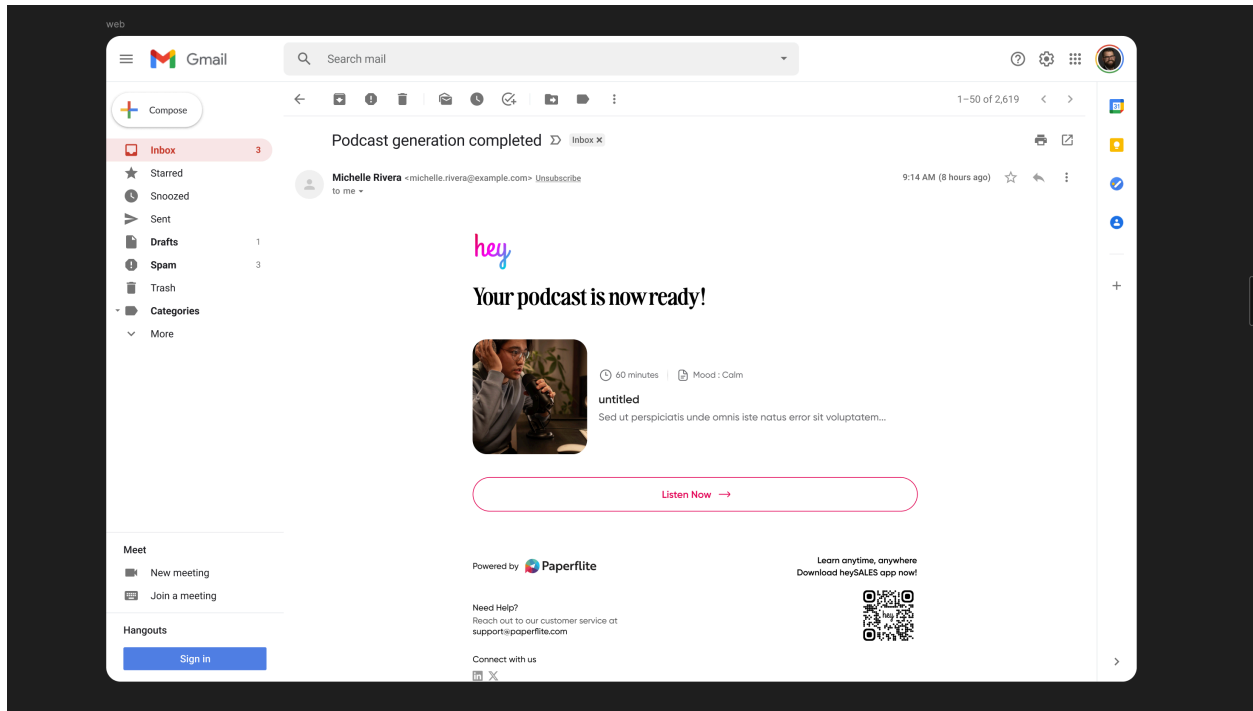

- transcript generation
- audio generation
- Upon audio generation completion, the toast will appear as successful with a 'listen now' button.
- At any point in time clicking on the toast itself or the listen now CTA button should redirect the user to the studio to that particular podcast.
- There will also be a close button at the success state of the toast clicking upon which will dismiss the toast.
- The toast will stay on the screen throughout navigation across modules within the application until dismissed after completion.
- The toast message will not be visible within the podcast screen in studio - it will only be visible when the user exits the podcast screen.

Toast Messages in Edit Flow

- A toast of same design should appear specifically for transcript generation.
- At the success state the CTA must display 'review now'.
- After clicking generate audio, a toast of same design should appear for audio generation.
- At the success state the CTA must display 'listen now'.

Email notification

- An email notification will go to the creator upon the podcast generation is complete.
- Clicking upon the CTA on the mailer will lead the user onto the webapp in the podcast within my studio who can then continue to assign the podcast to learners.

Notification Trigger - 2(only push notification)

- The notification should also be triggered in the 'edit flow' after the edit podcast is completed - meaning when the transcript is edited as per the prompt.
- Clicking upon the notification will lead the user to the podcast in the edit studio view - where the user can generate audio now.

Notification Trigger - 3(only push notification)

- When in edit studio, after the transcript edit, after clicking on the generate audio, this notification will be triggered upon the completion of the audio generation.
- Clicking upon the notification will lead the user to the podcast screen in studio for review.
