

Source Asset(s) Viewer - Podcasts

Objective

Enable podcast learners to view and reference original source assets/assets used to generate the podcast while listening, supporting scenarios with one or multiple assets per episode.

User Stories

- As a learner, I want to access the assets referenced in a podcast episode without interrupting playback, so I can better understand any visual or textual reference.
- As a learner, I want to see specific asset sections when the podcast mentions them (e.g., references to images, charts, or pages).

Acceptance Criteria

Asset Access

- Users will be able to view all the source assets associated with a podcast episode while the audio is playing listed on the right side panel along with skills and the transcript.
- Users will be able to click on any of the source assets which will lead to opening the asset viewer with selected asset populated in the viewer.

Asset Navigation

- Users can navigate within a asset (scroll for multi-page assets).
- If multiple assets are available for an episode, users can switch between them without interrupting playback.

Transcript Coexistence

- Users will be able to read through the transcript(play along) and refer assets at the same time.
- Users will also be able to scroll through the transcript.
- **The read-along with podcast feature will reflect in this state once live.**
- Both transcript and source viewer are openable, thereby both should remember its previous state (e.g., scroll position, page) within the same session.

Audio Player Integration

- The asset viewer operates in sync with the audio player—playback is uninterrupted when interacting with assets.
- Audio controls (play/pause, skip) remain accessible while assets are open.

Asset

- Metadata - file type and read-time of the asset should be visible in list view of the source assets on the right hand panel.
- Upon clicking an asset, user will additionally also be able to view a AI summary of the asset which he/she can read to get a quick understanding of the particular asset before deciding to read through the same - **Google NotebookLM**.

Synchronized Reference - to be taken in later phases

- **When a referred section (image, chart, page) is mentioned in audio or transcript, learners are prompted with the relevant asset/section (timestamp-based) in the form of citations.**
- **Clicking reference indicators displays the relevant section in the asset viewer.**
