

Learner Reports

The Problem We Are Solving

- Managers have visibility into rep performance but no direction — they can see a score is low but not why, and not what to do
 - Coaching decisions are made on instinct rather than evidence
 - Reps get a number (e.g. 74/100) with no context on which behaviour is dragging it down, whether they are improving, or what to focus on next
 - This module solves both problems — every insight is paired with a specific next action
-

Who This Is For

Front-line manager — primary user

- Coaches multiple reps at different stages simultaneously
- Needs to open a scorecard and within 30 seconds know: is intervention needed, what kind, and what to do first
- The report does the triage — the manager executes

Sales rep — secondary user, two variants

- Onboarding rep: needs to know where they stand against readiness criteria and what is blocking them from going live
- Active rep: needs to understand how their performance tracks vs the team and which specific skill to develop next

Enablement and L&D team — tertiary user

- Identifies curriculum gaps across the cohort
 - Measures whether training is translating into field performance
 - Not the primary audience for individual rep cards — consumers of aggregate signals
-

The North Star Metric

One metric is displayed prominently at the top of every rep's scorecard. It shifts as the rep progresses because the most meaningful signal changes by stage.

Stage	Rep situation	North star	Why
Stage 1	Onboarding — not yet on calls	Readiness score	Only question that matters: are they ready to go live?
Stage 2	Ramping — on calls, early pipeline	Call excellence score	Win rate has no data yet. Call quality predicts outcomes before they happen.
Stage 3	Independent — enough deal history	Win rate	Sufficient data exists. Outcome is now the right signal.

Readiness — Stage 1 Scope

One question drives Stage 1: is this rep ready to take an enterprise sales call independently?

Built on two pillars. Both must be cleared. Clearing one does not compensate for falling short on the other.

Pillar 1 — Knowledge

- All required courses must be passed at a minimum score of 70%
- Passed means achieving the threshold — not merely clicking through
- Required courses (V1): enterprise discovery fundamentals, value proposition and messaging, MEDIC qualification framework, competitive landscape and ICP
- Report shows: courses pending, courses passed, courses failed with current score and gap to threshold

Pillar 2 — Simulations

- Three frameworks must be assessed: discovery and qualification, demo and value proposition, closing and next steps

- Score used: best single attempt per framework — not the average
- Minimum 3 attempts per framework required before any score is registered
- Average best score across all three frameworks must reach 85%
- Floor rule: no individual framework may fall below 70%, regardless of the overall average

Why the floor rule matters

- A rep scoring 95% on discovery and demo but 65% on closing is not ready
 - Enterprise calls require competence across all stages — a gap in one area cannot be masked by excellence in another
-

Call Excellence — Stage 2 Scope

The north star shifts to call excellence once the rep is on live calls.

Composition

- 60% call quality score — AI-scored against the same three frameworks used in simulations
- 40% stage conversion rate — discovery to proposal progression
- Weighted this way because call quality is a leading indicator; conversion lags by approximately two weeks

Why the same scoring rubric as sims

- Enables a direct comparison between practice performance and live performance
- This comparison — the transfer gap — is one of the most valuable signals in the report (see below)

Pillar 3 — Real Call Readiness

- Each framework is tracked independently
- Framework enters evaluation only after 4 scored calls minimum — not before

- Score used: rolling average of last 4 calls per framework (not best-of — consistency matters more than peak in the field)
- Threshold: 85% average, with 70% floor rule applying equally to real calls

Framework status states

Status	Meaning
Accumulating	Not enough scored calls yet — shows progress toward minimum
Below threshold	Minimum calls reached, average under 85%
Cleared	Average at or above 85%, sustained
At risk	Was cleared, rolling average has since dropped below threshold

- At risk does not revert the rep's stage — it raises a targeted coaching flag without penalising progress already made

The Transfer Gap

- Defined as: simulation score minus real call score on the same framework
- A gap of 10+ points signals a transfer problem — the rep has the skill in practice but cannot apply it under live pressure
- This is not a training problem — more courses will not fix it
- The right intervention: joint call review, identifying the specific moments the rep loses confidence or falls back on a script
- Surfacing this explicitly prevents managers from prescribing the wrong coaching response

6. Win Rate — Stage 3 Scope

Activation

- Triggers automatically when rep has 8+ closed deals in a rolling 90-day window
- With a 1–3 month sales cycle, typically available 2–3 months after going live on calls

Calculation

- Closed won ÷ total closed deals, rolling 90-day window
- Always displayed with sample size — "62% based on 11 deals" reads differently from "62% based on 3 deals"
- Benchmarked against team average and top-performer quartile at the same tenure band

Role of call quality at Stage 3

- Call quality does not disappear — it becomes the diagnostic layer beneath win rate
 - When win rate is low, the report surfaces which framework scores are weakest and what call behaviour pattern is associated with the losses
 - Manager sees not just that win rate is below target but specifically why, connected to evidence
-

Action Cards by Stage

Stage 1 — Onboarding

Course not yet attempted

- Signal: MEDIC qualification has not been started
- Why: Required course — Pillar 1 cannot clear until passed at 70%+
- Action: Assign course → [Rep name]
- Type: **ASSIGN COURSE**

Course failed

- Signal: Value proposition and messaging — failed at 64%, needs 70%
- Why: One attempt made — gaps likely in ICP messaging or competitive differentiation module
- Action: Assign course (retry) → [Rep name]
- Type: **ASSIGN COURSE**

Sim — insufficient attempts

- Signal: Closing and next steps — only 1 of 3 required attempts completed
- Why: Score cannot register until minimum is met. Best score so far: 78%
- Action: Assign sim → [Rep name] — 2 more attempts required
- Type: **ASSIGN SIM**

Sim — below floor (highest urgency)

- Signal: Demo and value prop — best score 61%, below the 70% floor
- Why: Floor rule blocks readiness regardless of other scores. Gap is in handling the "we already have a solution" objection — scenarios 3 and 5
- Action: Assign sim (targeted: scenarios 3 and 5) → [Rep name]
- Type: **ASSIGN SIM**

Sim — below threshold

- Signal: Discovery and qualification — best score 79%, needs 85%
- Why: Weakest on scenario 4 — multi-stakeholder discovery with economic buyer absent
- Action: Assign sim — focus scenario 4 → [Rep name]
- Type: **ASSIGN SIM**

Both pillars cleared

- Signal: [Rep name] has cleared both onboarding pillars and is eligible for promotion
 - Why: Pillar 1 all courses passed, Pillar 2 all frameworks above 85% with no floor violations
 - Action: Review promotion checklist and promote [Rep name] to live calls
 - Type: **MANAGER ACTION**
-

Stage 2 — Ramping on Calls

Call excellence below target

- Signal: Call excellence score 71/100 — below the 85 target

- Why: Call quality is the driver (61/100 weighted). Stage conversion is healthy at 44% — bottleneck is call behaviour, not pipeline
- Action: Assign sim — Discovery and Qualification (reinforce live call fundamentals) → [Rep name]
- Type: **ASSIGN SIM**

Call excellence declining week-over-week

- Signal: Call excellence dropped 9 points in 2 weeks (81 → 72)
- Why: Concentrated in demo framework — avg demo score fell from 84 to 69 over 4 calls. Conversion unaffected yet. Early intervention window open
- Action: Schedule 1:1 call review — last 2 demo recordings → [Rep name]
- Type: **FUTURE – Coaching session scheduling**

Framework below threshold

- Signal: Discovery and qualification — rolling avg 78% across 4 calls, threshold 85%
- Why: Strongest with procurement-led calls (84–86%). Weakest on multi-stakeholder without economic buyer (68–72%). Pattern consistent across all 4 calls
- Action: Assign sim — multi-stakeholder scenarios without economic buyer → [Rep name]
- Type: **ASSIGN SIM**

Transfer gap detected

- Signal: Demo and value prop — sim 91%, call 74%, transfer gap 17 points
- Why: Not a knowledge gap. Rep performs well in practice but loses the narrative when prospects go off-script. Live-pressure problem, not a learning problem. More training will not fix this
- Action: Schedule call review — identify the 2–3 moments the rep loses the narrative thread
- Type: **FUTURE – Coaching session scheduling**

Framework on track — no action

- Signal: Closing and next steps — rolling avg 80%, up from 71% four weeks ago
- Why: 5-point improvement across last 2 calls. On track to clear within 1–2 more scored calls
- Action: No action required — check again after next 2 scored calls
- Type: NO ACTION

Framework goes At Risk

- Signal: Discovery cleared 3 weeks ago — now At Risk, rolling avg dropped to 79%
- Why: Was 87–89% for 5 calls, dropped to 71% and 74% on last 2. Coincides with shift to larger enterprise accounts with more complex stakeholder environments
- Action: Assign sim — enterprise multi-stakeholder scenarios → [Rep name]
- Type: ASSIGN SIM

Stage conversion below 35%

- Signal: Discovery-to-proposal conversion 27% this month, benchmark 40%+
- Why: 8 discovery calls, 2 moved to proposal. Stalled calls avg AI score 71 vs 78 for converted. Qualification depth is the differentiator
- Action: Assign sim — MEDIC economic impact scenarios → [Rep name]
- Type: ASSIGN SIM

Deal stalled 10+ days

- Signal: Acme Corp — no activity in 11 days, last call score 61, economic buyer not engaged
- Why: Last call was a demo with technical evaluator only. No next step was set. Deal will go cold within the week
- Action: Flag Acme Corp for manager deal review and set follow-up task
- Type: FUTURE – Deal flagging

Framework plateau — no improvement in 3+ weeks

- Signal: Closing and next steps — score 76–78% for 4 consecutive weeks, no movement
 - Why: Rep has completed 9 sim attempts. More practice will not move this. Structural gap requires a targeted coaching conversation to find the specific breakdown point
 - Action: Schedule coaching session — identify breakdown in closing sequences
 - Type: FUTURE – Coaching session scheduling
-

Stage 3 — Independent Rep

Win rate below team average

- Signal: Win rate 47% (13 deals), team average 58%
- Why: 7 losses at proposal stage. Post-proposal call scores avg 68 on losses vs 78 on wins. Closing framework is the differentiator
- Action: Assign sim — Closing and next steps, proposal-stage objection handling → [Rep name]
- Type: ASSIGN SIM

Win rate declining across 2 periods

- Signal: Win rate dropped from 62% to 47% over last 60 days
- Why: Period 1 (8 deals): 62% win, avg call score 82. Period 2 (5 deals): 47% win, avg call score 71. Both declining together — this is behavioural shift, not variance
- Action: Run loss analysis session — review last 3 closed-lost call recordings with rep
- Type: FUTURE – Coaching session scheduling

Win rate healthy but one framework weak

- Signal: Win rate 61%, demo framework call score 71% — lowest of the 3

- Why: Deals won despite weak demo calls are succeeding on discovery strength alone. Ceiling problem — improving demo could push win rate higher without any other change
- Action: Assign sim — Demo and Value Prop, advanced enterprise scenarios → [Rep name]
- Type: **ASSIGN SIM**

Rep in bottom quartile vs same-tenure peers

- Signal: [Rep name] in bottom 25% of reps at 3–6 months tenure on call excellence
- Why: Cohort average 79, rep score 68, gap consistent for 6 weeks. Peers at the same stage have cleared the benchmark — this is not a ramp timing issue
- Action: Assign course — Enterprise Discovery Foundations (refresher) → [Rep name]
- Type: **ASSIGN COURSE**

Rep in top 10% of team

- Signal: [Rep name] in top 10% on call excellence (94/100), win rate 71%, 13 points above team average
- Why: Consistent across all 3 frameworks for 8 weeks. Strongest on discovery — all scenario handling above 90%
- Action: Consider [Rep name] for peer coaching or call shadowing programme
- Type: **FUTURE – Peer coaching assignment**

Rep Self-View — Language and Framing

The rep sees the same cards as the manager with two differences: manager assignment controls are hidden, and the language shifts from diagnostic to directional.

Manager card says	Rep card says
"Demo score 61% — below 70% floor. Assign sim."	"Your demo score is 61%. You need 70% to clear this. Here's the sim — try scenario 3 first."

Manager card says	Rep card says
"Transfer gap: sim 91%, call 74%."	"You score 91% in practice. Your live calls are at 74%. The skill is there — try this to bridge the gap."
"Win rate below team average at 47%."	"Your win rate is 47%. Team average is 58%. Your last 3 losses happened at proposal stage — that's your focus area right now."
"Rep in bottom quartile vs same-tenure peers."	"Here is where you stand vs the typical rep at your stage — and here is what to focus on."
