

# Real call scoring

## Overview

Assessing real sales calls within the heysales platform and practicing/learning based on the same.

## Target Persona and Usecases

|                         |                                                                                              |
|-------------------------|----------------------------------------------------------------------------------------------|
| <b>Sales rep</b>        | Assess how well they have performed in their real call based on the expectations/methodology |
|                         | Retake mocks of their real calls until they hit the target score                             |
|                         |                                                                                              |
| <b>Other sales reps</b> | Listen to top rated real calls and listen to the respective recordings to learn from it      |
|                         | Take a mock for the call to see where they stand in terms of taking a call like that         |
|                         | Compete with the original rep and other reps and score higher than them                      |
|                         |                                                                                              |
| <b>Sales managers</b>   | Assess the real calls of the team                                                            |
|                         | Identify skill levels of reps and top reps/weak reps                                         |
|                         | Give feedback to reps on their calls                                                         |
|                         | Assign challenging/interesting real calls to other reps for them to practice                 |
|                         | Assign learning material to reps based on their weaknesses                                   |

## Phase 1

- Integrate with Zoom to get constant in-flow of data
- Send the assessment reports to manager through email

**To align on:**

- Definition of sales call
  - how do we choose which calls to run report for and which ones not to
    - one possible definition could be mail id match between zoom meeting and a CRM record
- Additional data analysis
  - in addition to running reports for the calls what are the additional data we can get out of the real calls
    - we ideally need to extract information that can be tied to microlearning at one point:
      - objections that came up in the call
      - skills that were tested in the call - for us to give recommendations of learnings
      - next steps?
      - Hyperbound:
        - **Objection Handling:** Identifies how objections were raised and addressed
        - **Buying Signals:** Flags indicators of prospect interest and readiness
        - **Missed Opportunities:** Highlights where reps failed to capitalize on openings
        - **Key Moments:** Extracts pivotal conversation points for review

## Data Flow - heysales - Zoom x Hubspot

### Recording Completion

- A sales rep completes Zoom call with customer
- Zoom processes recording
- Zoom triggers webhook event to heysales endpoint

## **Webhook Reception**

- heysales receives webhook request
- Extracts meeting metadata and participant emails

## **Sales Call Identification**

- Extract participant email addresses from Zoom webhook payload
- Exclude all calls where all participants have same domain in the mail as the user(host)
- Query HubSpot API to find contacts matching participant email addresses of the remaining calls
- For each matched contact, retrieve associated deals/opportunities
- Filter for deals with status NOT "Closed Won" or "Closed Lost"
- Call is classified as "sales call" if at least one participant matches a contact with an active deal

## **Recording Download**

- Fetch Zoom access token
- Download MP4 recording file via Zoom API
- Download VTT transcript file if available
- Store files and update db with file paths and metadata

## **Assessment Generation**

- Extract or generate transcript text
- Pass audio/transcript to assessment
- Generate assessment
- Store assessment results in db

## **Report Distribution**

- Retrieve sales rep email (Zoom host)
- Generate email content with assessment summary

- Send email

## **(Email to Manager**

- For now, find and classify admin in a selected user group as the sales manager of a particular user.)
- Take meeting IDs from only Kennie, Mathew, Ananya, Sharath, Reuben
  - eliminate CS calls
- At least 1 participant from another domain(not the sales rep's)
  - eliminate internal meetings
- Name of the meeting contains 'Walkthrough' or 'Access'
  - choose only discovery calls to assess
- Fetch emails of foreign domain participants

Look for domain in the CRM - contacts

find deals mapped to those contacts

Deal is from Sales Pipeline

Deals - close date is unknown or not entered

Deal stage is not Won/Lost

- recording completed/transcription
  - is transcription completed -
  - when do you want to create the call - UI decision

Rejecting:

- if transcript is not there - reject
  - if audio is not there - reject
  - if duration is 0 - reject
  - total
- 
- Do we sync with Zoom
    - meaning deleting here, does it delete there?
  - If I deactivate Zoom, the calls will go from our db?
    -
  - If domain is set up in the account - fetch domain from the account
  - fetch calls with emails of people - is this Paperflite users or Zoom users - email address
  - guest - excluded - recipient has to have email address

Exclude domain - pick company's domain

## **CRM**

all conditions are soft conditions

Key Functionalities/Capabilities

| Persona   | Functionality |
|-----------|---------------|
| Sales rep |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |
|           |               |

Who it is for

|               |                                                     |
|---------------|-----------------------------------------------------|
| Sales manager | Assess the real calls of the sales reps of the team |
|---------------|-----------------------------------------------------|

|  |                                                                |
|--|----------------------------------------------------------------|
|  | Assess the standing of the sales team today                    |
|  | Identify weaknesses of the team                                |
|  | Create tailored coaching(simulations) to strengthen weaknesses |
|  |                                                                |

|                  |                                                  |
|------------------|--------------------------------------------------|
| <b>Sales rep</b> | Assess their real calls to self-evaluate         |
|                  | Practice their weak calls in order to do better. |

## Sales Manager

|  |                                                                 |
|--|-----------------------------------------------------------------|
|  |                                                                 |
|  | To view all calls taken by the team.                            |
|  | To filter down on calls.                                        |
|  | To view scorecards of all the calls.                            |
|  | To view overall analytics of the team.                          |
|  | To drill down on each rep and view filtered analytics.          |
|  | To view rep level analytics.                                    |
|  | To view scorecard level analytics for the team                  |
|  | To view general conversational analytics for the team           |
|  | To be able sort calls by the highest scores and lowest scores   |
|  | To be able to assigns calls for other reps to listen with notes |
|  | To be able to comment and give feedback on the calls            |
|  | To be able to create a mock for a call and assign it to reps    |
|  | To be able to view also mock analytics attached to a call       |

## Sales Rep/Individuals

|  |                                                                |
|--|----------------------------------------------------------------|
|  | To upload their own calls seamlessly                           |
|  | To choose which scorecard they want the call to be assessed on |
|  | To view the scorecard for their call                           |
|  | To view general conversational analytics for the call          |

|  |                                                |
|--|------------------------------------------------|
|  | To view feedback given by manager for the call |
|  | To view calls that have been assigned to them  |
|  | To take a mock for their call                  |

### **Discovery Call Scores**
