

Fireflies - Real Call Scoring

With this implementation, we will be integration with Fireflies AI as a first step into the epic of assessing Field Calls.

Objective

- The primary objective is to assess in-person mobile recordings of sales conversations and assess them and track them in heysales.
- In addition to the primary objective, we will also use Fireflies transcripts in case of Zoom or any recordings since the transcript is better in Fireflies.

Acceptance Criteria

- There will now be a Fireflies integration in the Integration in the Paperflite's Integrations.
- The integration for now will be hard coded with a particular account.
- The integration is supposed to be an account level integration.
- Calls from fireflies of all types should be flowing into the platform and being scored:
 - fireflies app - recordings
 - fireflies app - uploaded calls
 - fireflies - zoom integrated zoom calls
- All calls flowing in from fireflies should be scored and reflected in real call library.
- When both fireflies and zoom are integrated, Fireflies is supposed to be used for real call scoring.
- The real call library scope will be same.
